

Connection technology for Linear Motion Systems

1.3

The easy way to connect your linear motion systems – fast, flexible and accurate!

Minimum mounting times, maximum efficiency, connection kits reduce your effort significantly at the installation stage. The mechanical systems have positive-locking interfaces throughout. They can be quickly and accurately connected together without time-consuming alignment.

The result:

Users can respond flexibly to different handling applications and requirements.

- ▶ Please configure linear motion systems using the product catalogs and combine them with the connection kits from this catalog.
- ▶ Connection kit dimensioning

The connection kits are designed for geometric compatibility. The connection kits need to be technically checked for load-bearing capability according to the application.

Connection technology for linear motion systems – the fast and easy way to combine electromechanical components

▲ Angle bracket connection kit

▲ Plate connection kit

▲ Connection kit

The well-thought-out and standardized mechanical interface further enhances the modularity and efficiency of the linear motion system building system.

The electromechanical linear motion system components fit perfectly thanks to the positive locking interface.

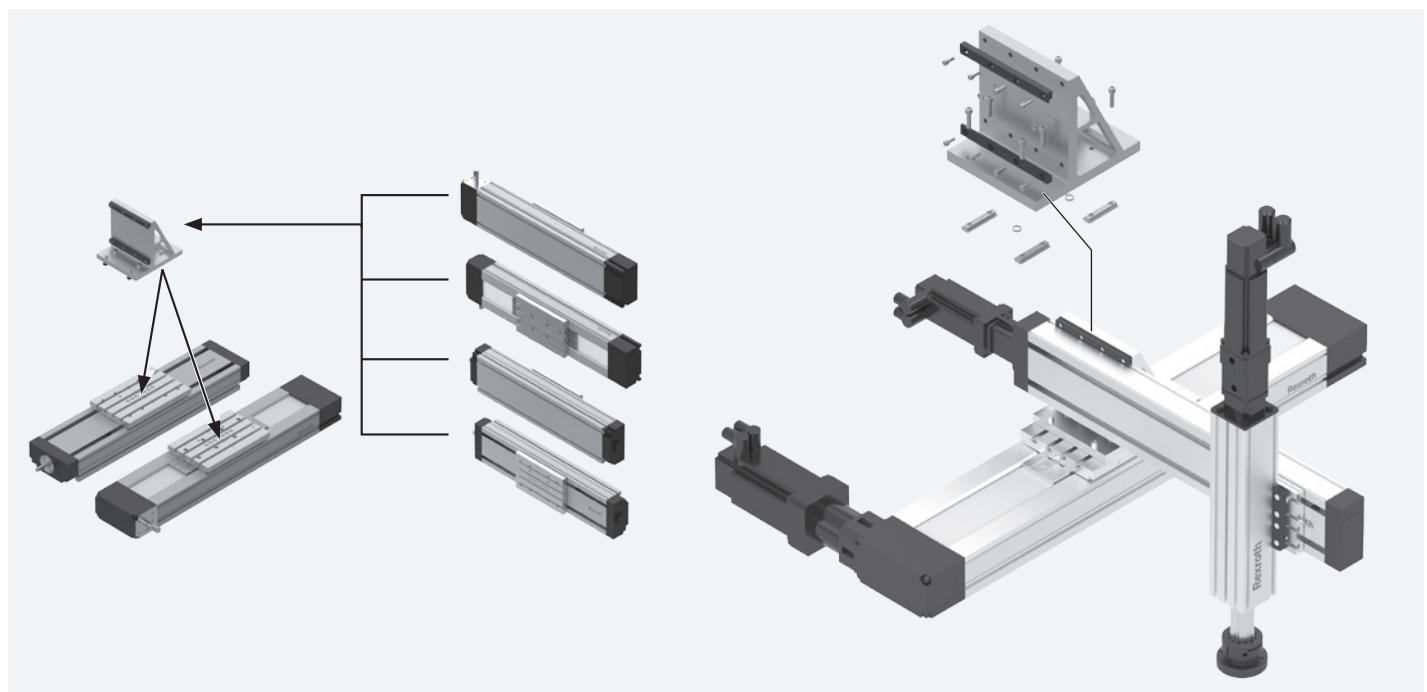

As a result, users can put together complete systems quickly and easily to meet their own specific handling tasks. The innovative locating grid and centering ring technology ensures unrivaled precision and reproducibility when connecting various linear motion systems.

In terms of design and scope, the connection element portfolio is optimally adapted to match the components and each specific connecting task, enabling a very broad spectrum of combinations and assembly options. The entire range has been designed to minimize effort every step of the way.

The connection elements can also be used with further strut profile accessories to build frames and supporting structures. The linear motion system building system also includes adapters for integrating cable drag chains and guide channels.

If desired, systems can also be delivered completely pre-assembled.

Linear motion system – connection technology

Build powerful handling systems easily and flexibly – with connection technology from Rexroth

Advantages:

- ▶ Easy and fast assembly thanks to direct connections or pre-fabricated assemblies
- ▶ Positive-locking and force-fit connections by means of centering elements
- ▶ Optimized execution and shape
- ▶ Weight-optimized
- ▶ Broad spectrum of combination options

Benefits:

- ▶ Reduced design and installation effort saves time and money
- ▶ High accuracy, durability, and reproducibility
- ▶ Minimized space requirement and weight, yet high stability and dynamics
- ▶ Flexible thanks to component commonality

How to find the connection kit you need

Perfectly combined – more than just one direction

Define the linear motion system in the product catalogs and find the required connection kit for your desired combination in this catalog.

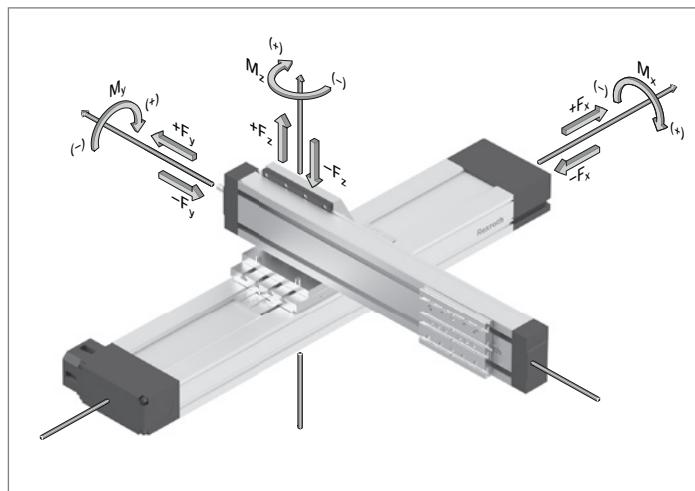

General Information

The following examples describe how linear motion systems are connected to a **linear gantry** (Part I) or a **3-dimensional gantry** (Part II). By combining several of these connections, complex multiaxis systems can be built with ease.

Installation position

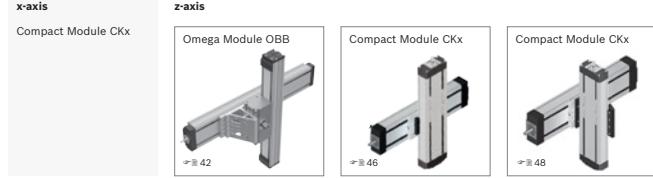

The division into **X-Y and X-Z directions** in this catalog merely serves as classification criterion (e.g. for the direction of force). The products can be installed in any position.

in x-y-direction

in x-z-direction

Selecting the linear motion axis

At the beginning of planning a multi-axis combination, suitable individual axes are selected according to the load and application.

This is done according to the product catalog of the respective linear motion system.

Combining the linear motion axes

Based on the selected individual axes (components) and the intended connection type (X-Y, X-Z, etc.), certain product features (options) may be required. These are specified here in the "Connection technology for linear motion systems" catalog with the respective connection.

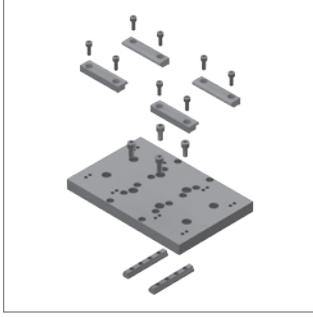

► Connection technology for linear motion systems catalog

Linear Module MKx – Linear Module MKx

**Connection with plate 2X-Y
(with clamping fixture)**

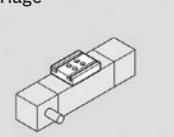

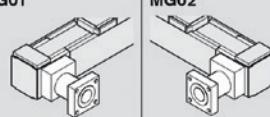

Components	Carriage option
x-axis MKx	Carriage, with T-slot
y-axis MKx	any

Scope of supply
Connection plate, anchor strips, clamping fixtures, socket head cap screws

The required product features (options) need to be taken into account when configuring the individual linear motion axes (components).

► Product catalog "Configuration and ordering"

Bosch Rexroth AG, R310EN 2606 (2017-04)

Identifying the connection kit

The connection elements therefore need to be identified when selecting the product.

The **guideway** and **carriage** options are pertinent as these will be connected. Depending on the characteristics of the linear motion axes, both the same options (e.g. carriage on carriage) and different options (e.g. frame on carriage) can be combined.

► Product catalog “Configuration and ordering”

Linear Module MKx – Compact Module CKx

Connection via angle brackets 2X-Y

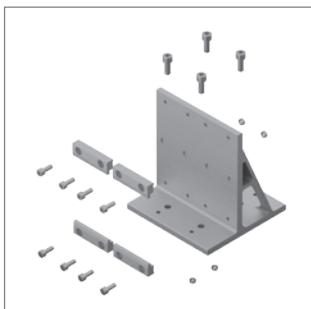

linear module - carriage with T-slot

For this connection, the appropriate order options must be selected when configuring the Compact Modules and Linear Modules, see Compact Modules and Linear Modules catalogs, "Configuration and ordering" section.

Components	Guideway option	Carriage option
x-axis	MKx	any
y-axis	CKx	mounting-dependent

Scope of supply

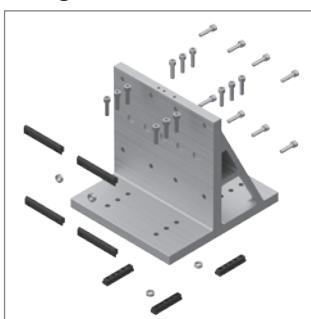

Connection bracket (material: Al), clamping fixtures (material: Al), screws, centering rings for CKx -200: Connection bracket (material: Al), screws, centering rings, washers, sliding blocks

▲ Angle bracket connection kit

▲ 2X-Y connection

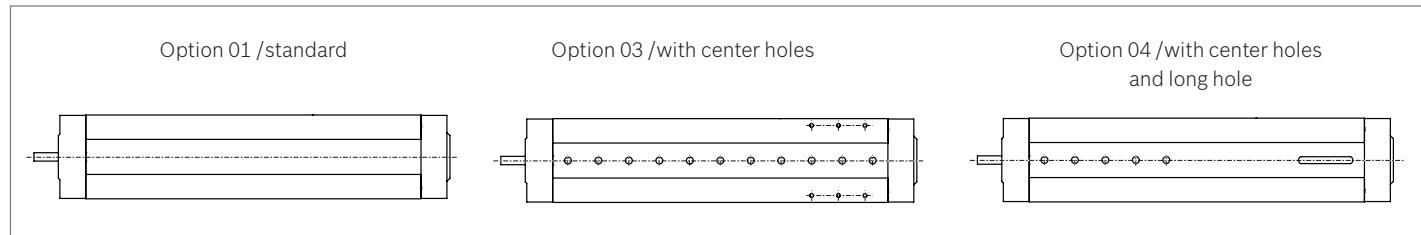

▲ CKx -200 adapted with sliding blocks

Easily connected: the interface with centering device

The use of standardized centering devices makes it possible to simplify mounting and to reproduce the system mounting in the event of an exchange. For this purpose, centering rings are included in the corresponding connection groups. For the selected linear motion systems, the appropriate options must then be selected in line with the product configuration.

Depending on the linear motion system, several options are suitable for the connection and the selection is dependent on the planned mounting. This applies to connections with compact modules, for example. One of the frame options shown below can be used accordingly. Here, the design engineer has all the freedom needed to adapt the product to the intended use. The use of centering rings is optional in terms of load capacity since the technical data for the assembly are determined without them.

► Product catalog “Guideway/carriage options”

► Connection technology for linear motion systems catalog

Compact Module CKx – Compact Module CKx

Direct connection X-Y

(Can also be used as an X-Z connection)

For this connection, the appropriate order options must be selected when configuring the Compact Modules, see Compact Modules catalog, “Configuration and ordering” section.

Carriage travels

	Components	Guideway option	Carriage option
x-axis	CKK, CKR	any	“41” (“09”)
y-axis	CKK, CKR	mounting-dependent	“41” (“09”)

	Components	Guideway option	Carriage option
x-axis	CKK, CKR	any	“41”
y-axis	CKK, CKR	any	“41”

▲ Carriage travels

▲ Frame travels

▲ Clamping fixture connection kit

Checking the permissible loads of the connection kits

After the connection element has been selected, it needs to be checked in terms of its use using the technical data. The coordinate system of the respective version must be observed and, depending on the mounting direction, turned to the actual position in space, if necessary.

► Connection technology for linear motion systems catalog

Load calculation and comparison

$$\left| \frac{M_x}{M_{x \text{ max}}} \right| + \left| \frac{M_y}{M_{y \text{ max}}} \right| + \left| \frac{M_z}{M_{z \text{ max}}} \right| + \left| \frac{F_x}{F_{x \text{ max}}} \right| + \left| \frac{F_y}{F_{y \text{ max}}} \right| + \left| \frac{F_z}{F_{z \text{ max}}} \right| \leq CB$$

Specify the operating factor CB

Specify the operating factor CB according to the following table:

	Application examples	Operating factor CB
low dynamics	Door guides, guiding of protective enclosures	0.85
medium dynamics	Mounting devices	0.65
high dynamics	PCB assembly, applications with linear motor	0.50

Permitted values for connection kits

Example of how to identify the right connection kit - Part A
Linear gantry as an X-Z combination

Step 1 – Select the system

- Product catalog “configuration and ordering”

The two **CKK-145** and **VKK-070** linear motion systems were selected on the basis of the application and load as per the specifications in the respective product catalogs.

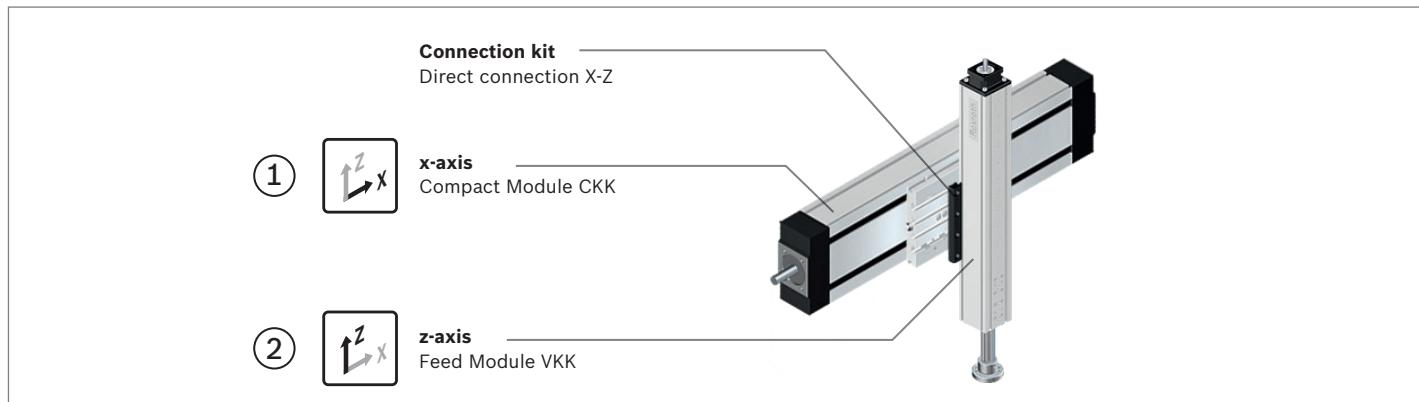

- Connection technology for linear motion systems catalog

Three configuration options are available for both of the linear motion systems selected.

The following connection was selected as suitable for the example application

Step 2 – Identify the connection kit

The appropriate connection kit for the selected combination now needs to be identified.

The coordinate system in the configuration diagram indicates which axis is meant in the table.

► Connection technology for linear motion systems catalog

Compact Module CKx – Feed Module VKK

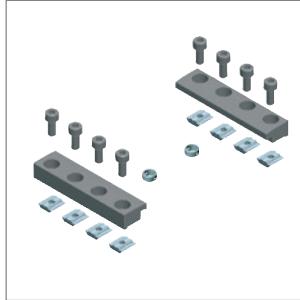

Direct connection X-Z

For this connection, the appropriate order options must be selected when configuring the Compact Modules, see Compact Modules catalog, “Configuration and Ordering” section.

Components	Carriage option
x-axis	CKK, CKR "41"("09")

= required connection kit

Example II – How to identify the right connection kit

3-dimensional gantry as a X-Y-Z combination

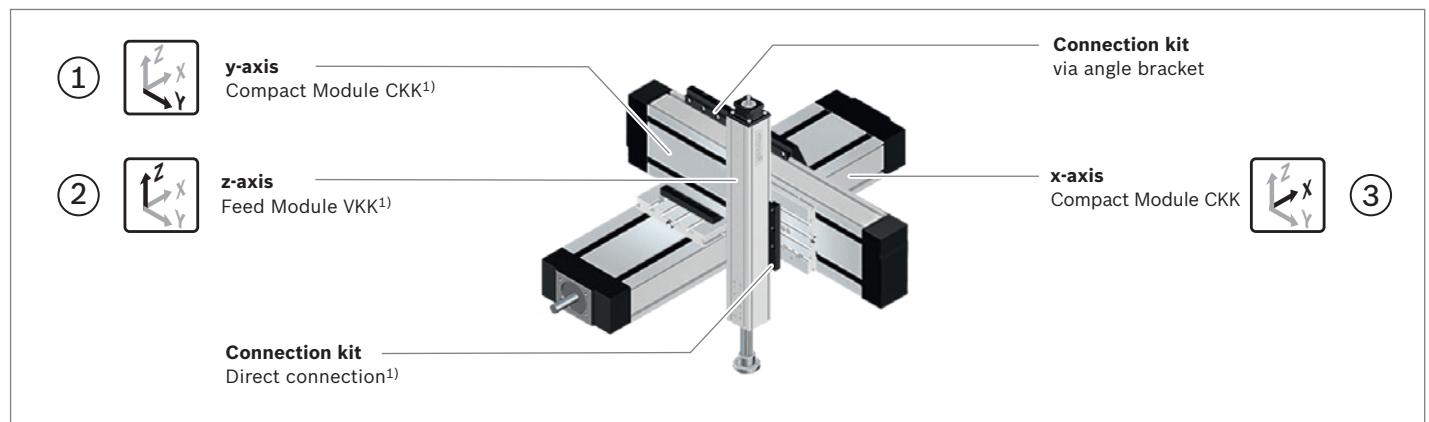

Step 1 – Select the system

The following linear motion systems were selected on the basis of the application and load as per the specifications in the respective product catalogs: 2x **CKK-145** and **VKK-070**.

► Product catalog “Configuration and ordering”

The following connection was selected from the available assemblies.

¹⁾ These components were already selected/checked in Part A

Step 2 – Identify and check the connection kit

The appropriate connection kits for the selected combinations now need to be identified.

The coordinate system in the configuration diagram indicates which axes are meant in the table.

The two components to be connected must always be considered separately.

Selecting and checking the connection kit

CKK-145 with CKK-145

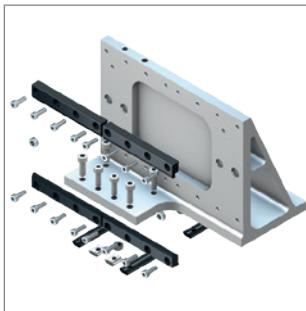

- Connection technology for linear motion systems catalog

Compact Module CKx – Compact Module CKx

Connection via bracket X-Y (reinforced right-hand version)

For this connection, the appropriate order options must be selected when configuring the Compact Modules, see Compact Modules catalog, “Configuration and Ordering” section.

Components	Guideway option	Carriage option
x-axis	CKK, CKR	any
y-axis	CKK, CKR	mounting-dependent

Scope of supply

Connection bracket (material: Al), clamping fixtures (material: Al), sliding blocks, screws, centering rings

= required connection kit

Notes

Intended Use

- Linear motion systems and the connection technology for linear motion systems are intended for positioning in space under external loads.
- The product is intended for professional use and not for private use.
- Intended use includes having read and understood this documentation, the instructions for the product, the "Safety instructions for linear motion systems" document, and especially the section "Safety instructions".
- The product is exclusively intended for incorporation into a final machine or system or for assembling with other components to build a final machine or system.

Misuse

Use of the product in any other way than as described under "Intended Use" is considered to be misuse and is therefore not permitted. If unsuitable products are installed or used in safety-critical applications, this may lead to uncontrolled operating statuses in the application which can cause personal injury and/or damage to property. The product may only be used in safety-critical applications if this use has been expressly specified and permitted in the product documentation.

Bosch Rexroth AG will not accept any liability for injury or damage caused by misuse of the product. The risks associated with any misuse of the product shall be borne by the user alone.

Misuse of the product includes:

- the transport of persons

General Safety Instructions

- The safety rules and regulations of the country in which the product is used must be complied with.
 - All current and applicable accident prevention and environmental regulations must be adhered to.
 - The product may only be used when it is in technically perfect condition.
 - The technical data and environmental conditions stated in the product documentation must be complied with.
 - The product must not be put into service until it has been verified that the final product (for example a machine or system) into which the product has been installed complies with the country-specific requirements, safety regulations and standards for the application.
 - The product is never allowed to be disassembled. Excluded from this are the activities described in the product instructions.
 - All notices on the product itself must be complied with.
 - Only use accessories and spare parts approved by the manufacturer.
 - The special safety requirements for specific sectors (e.g. crane construction, theaters, food technology) set forth in laws, directives and standards must be complied with.
- This also includes, for example, falling loads that pose a potential hazard for people.
- The following standards must be complied with: DIN 637, ISO 3408 and DIN 69051

Directives and Standards

Rexroth linear motion systems are suitable for use in various applications and industries. The various industries must comply with a series of standards and guidelines.

These requirements can vary significantly worldwide. It is therefore essential to understand the legislation and standards that apply in each particular region.

EN ISO 12100

This standard describes the safety of machinery – general principles for design, risk assessment and risk reduction. It gives a general overview and contains a guide to the major developments governing machines and their intended use.

Directive 2006/42/EC

The European Machinery Directive describes the basic safety and health requirements for the design and manufacture of machinery. The manufacturer of a machine or his authorized representative has a duty to ensure that a risk assessment has been performed in order to determine the health and safety requirements which have to be fulfilled for that machine. The machine must be designed and built taking into account the results of the risk assessment.

Directive 2001/95/EC

This directive covers general safety requirements for any product placed on the market and intended for consumers, or likely to be used by consumers under reasonably foreseeable conditions, including products that are made available to consumers in the context of service provision for use by them

Directive 85/374/EEC

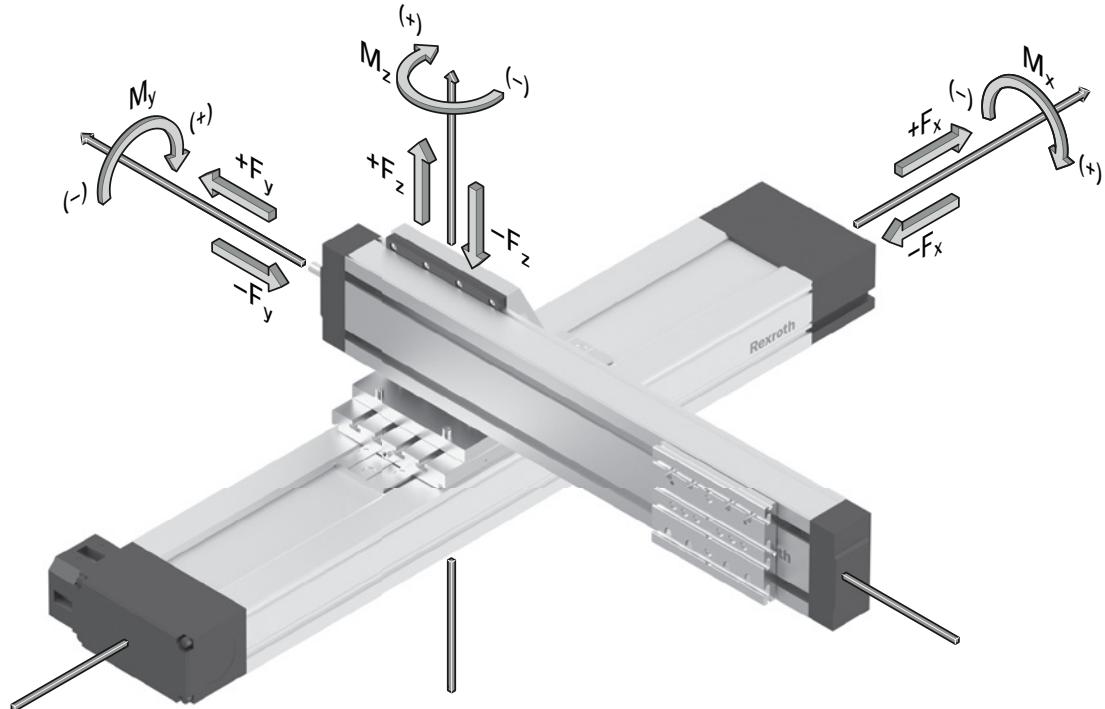

This directive concerns the liability for defective products and applies to industrially manufactured movable objects, irrespective of whether or not they have been incorporated into another movable or immovable object.

Directive 76/769/EEC

This directive describes the restrictions on the marketing and use of certain dangerous substances and preparations. “Substances” means chemical elements and their compounds as they occur in the natural state or as produced by industry. “Preparations” means mixtures or solutions composed of two or more substances.

Permissible loads of the connection kits

The permissible loads of the individual axes must not be exceeded. This must be checked before selecting the connection kits. In some attachment variations, the permissible loads for the individual axis represent the upper load capability limits. Such connection kits are not listed in the following tables.

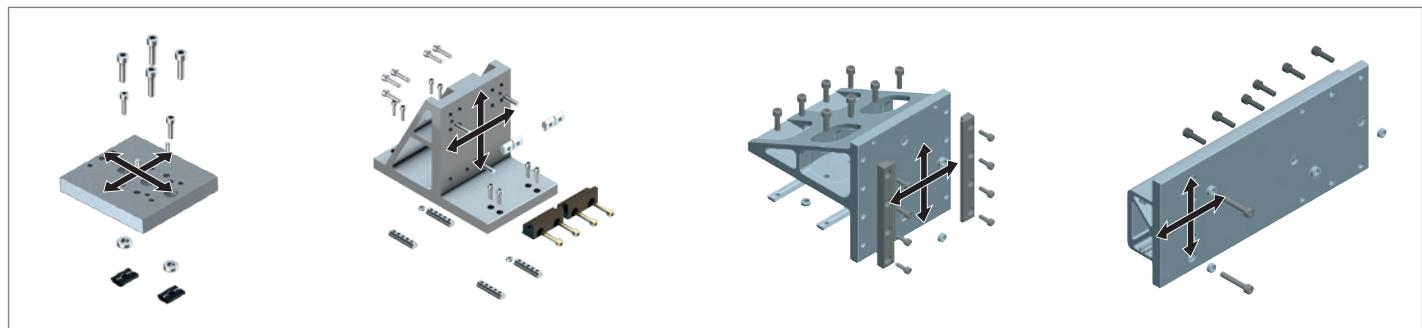

The permissible load values of the connection elements serve as guideline values. In the case of critical applications or applications with high dynamic loads (> 50% of the permissible loads), the connection kits must be recalculated according to the application requirements. For the external loads of a linear motion axis and the connection kits, not only the process forces but the inertial forces of the products used must always be determined and taken into consideration.

Define the forces and load moments

All external forces and load moments must be referred to the origin of the coordinate system. These values must be specified by the customer.

Define the coordinate system

The origin of the coordinate system for the calculation of the applied forces and moments lies at the center of the connection element, on the clamping surface of the moved linear axis.

Load calculation and comparison

$$\left| \frac{M_x}{M_{x \text{ max}}} \right| + \left| \frac{M_y}{M_{y \text{ max}}} \right| + \left| \frac{M_z}{M_{z \text{ max}}} \right| + \left| \frac{F_x}{F_{x \text{ max}}} \right| + \left| \frac{F_y}{F_{y \text{ max}}} \right| + \left| \frac{F_z}{F_{z \text{ max}}} \right| \leq CB$$

Specify the operating factor CB

Specify the operating factor CB according to the following table:

	Application examples	Operating factor CB
low dynamics	Door guides, guiding of protective enclosures	0.85
medium dynamics	Mounting devices	0.65
high dynamics	PCB assembly, applications with linear motor	0.50

Basic principles

The permitted values shown in the tables apply under the following conditions:

- Screws have been tightened using a torque wrench as specified in the table below
- Mounting screws of strength class 8.8 have been used (are included)
- Screws have been lightly lubricated
- Friction coefficient $\mu = 0.125$
- Screw connections have been calculated in accordance with VDI guideline 2230

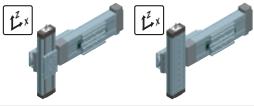

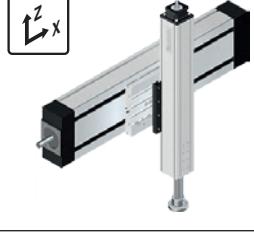

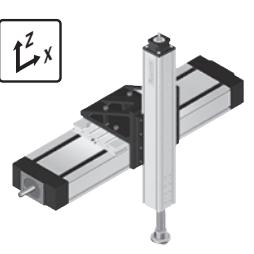

Tightening torques

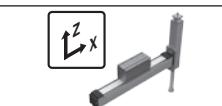

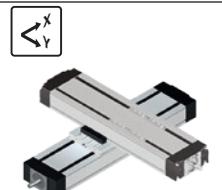

Screw thread	M2	M2.5	M3	M4	M5	M6	M8	M10	M12
Tightening torque (Nm)	0.4	0.7	1.3	2.7	5.5	9.5	23	46	80

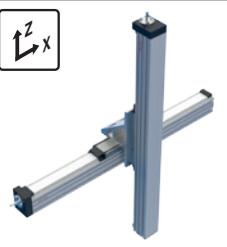

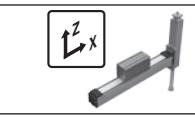

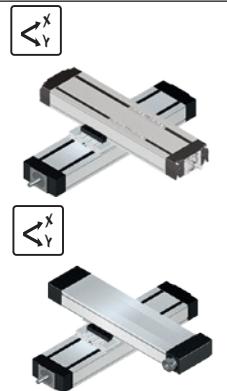

$\mu: 0.125$; strength class: 8.8

All screws that are not coated with a threadlocking adhesive on delivery must be secured against loosening with a suitable threadlocking adhesive (e.g. Loctite 242).

Permitted values for connection kits

	Page	Part number	x-axis	y-axis	z-axis	F_x max (N)	F_y max (N)	F_z max (N)	M_x max (Nm)	M_y max (Nm)	M_z max (Nm)

Combination options with profiles

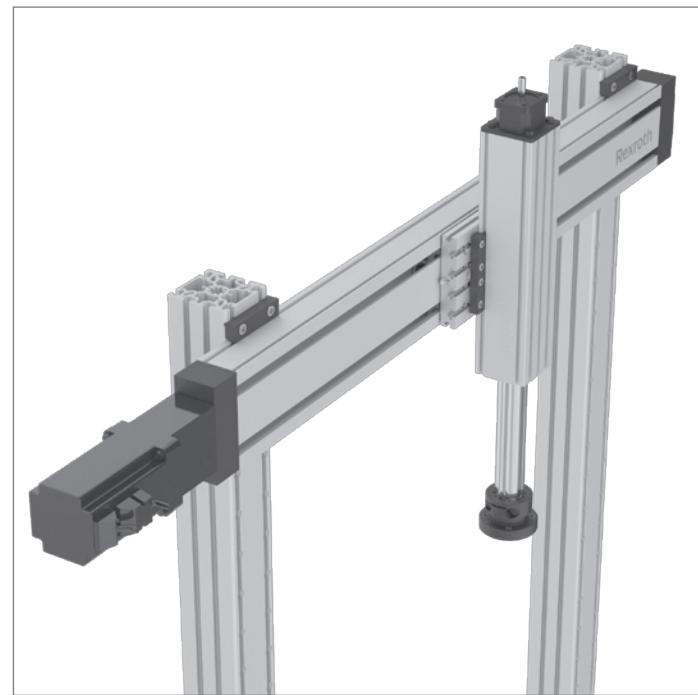

Rexroth offers multiple options for fastening axis systems to a base frame.

Strut profiles for constructing all kinds of frames, feet for simple fastening to the base frame

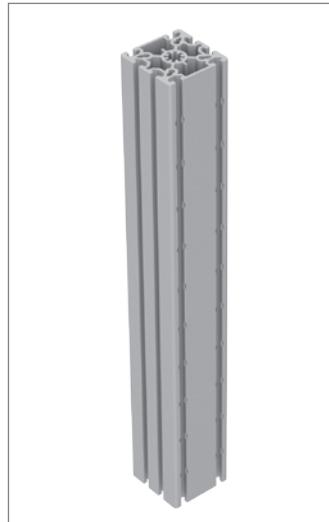

End-face attachment of the linear motion system

Side mounting of the linear motion system

**Strut profile:**

- ▶ Space-saving and rigid design
- ▶ Positive-locking connection (centering rings)
- ▶ Compatible with Basic Mechanical Elements (MGE) from Rexroth, profile size PB 30 and PB 45

**Foot:**

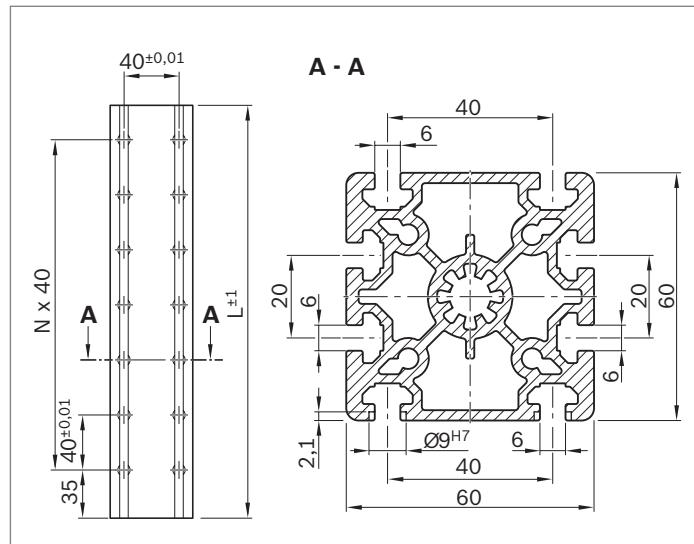

- ▶ Simple connection of strut profile to base frame
- ▶ Positive-locking connection (centering rings)
- ▶ Compatible with Basic Mechanical Elements (MGE) from Rexroth, profile size PB 30, PB 40 and PB 45

**Connection kit:**

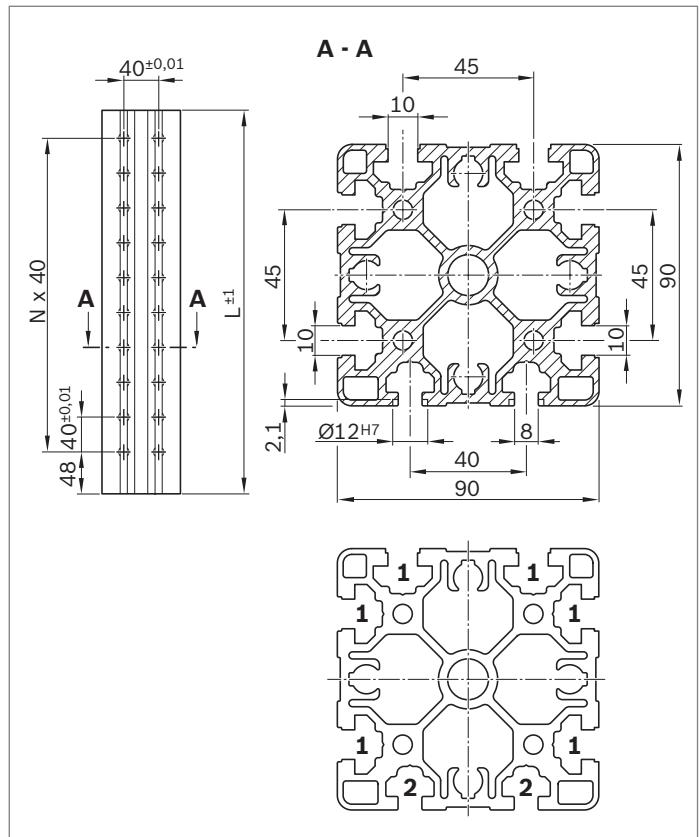

- ▶ Direct mounting
- ▶ Positive-locking connection (centering rings)
- ▶ No alignment necessary
- ▶ minimized installation effort

Strut profiles 60 x 60, 90 x 90

Aluminum profile, clear anodized
 Space-saving and rigid design
 Standardized modular dimensions/spacing
 Positive-locking connection (centering rings)
 Compatible with Basic Mechanical Elements (MGE)
 from Rexroth

▲ Strut profile size 60 x 60

▲ Strut profile size 90 x 90

1 for sliding block 10 mm
2 for sliding block 8 mm

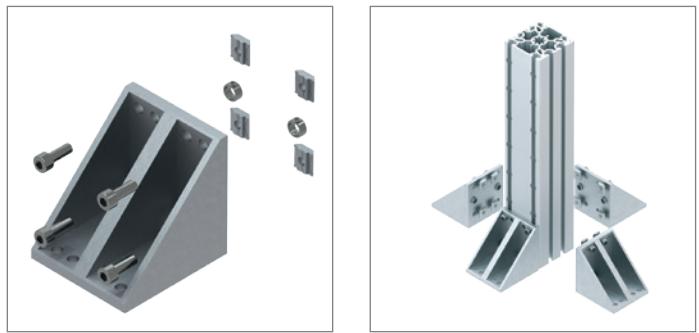

Strut profile	Profile nominal dimension	Part number	L _{max} (mm)	Length variable	m	Planar moment of inertia I _x = I _y (cm ⁴)
60 x 60	60	R037531036	4000		15.6	48.6
		R037531037		○	3.9	
90 x 90	90	R037541030	4000		31.2	230.0
		R037541032		○	7.8	

Foot for profile size 60 x 60

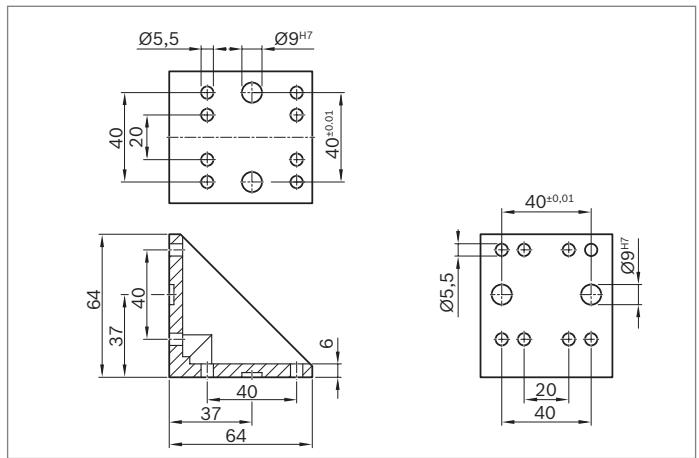

Simple connection of strut profile to base frame
Compatible with Basic Mechanical Elements (MGE)
from Rexroth, profile size PB 20 and PB 40

Scope of supply

Foot angle bracket (material: Al), sliding blocks, screws,
centering rings

Part number	m (kg)
R037530013	0.21

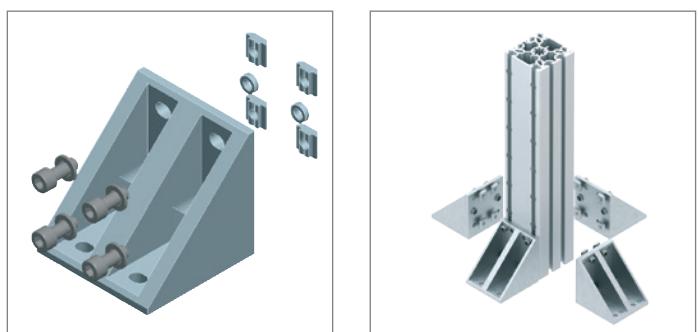

Foot for profile size 90 x 90

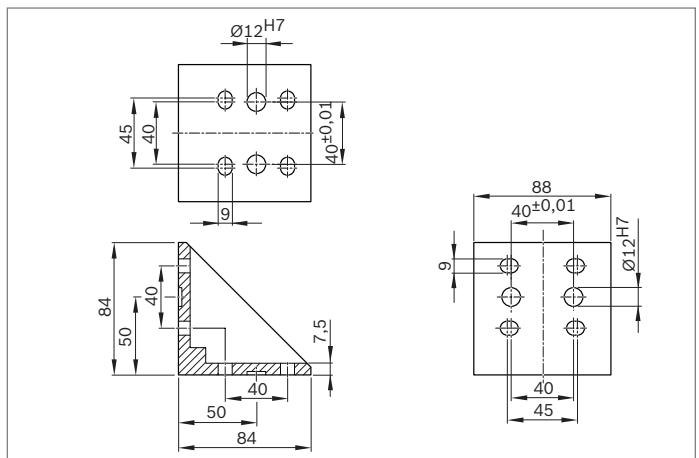

Simple connection of strut profile to base frame
Compatible with Basic Mechanical Elements (MGE)
from Rexroth, profile size PB 40 and PB 45

Scope of supply

Foot angle bracket (material: Al), sliding blocks, screws,
centering rings

Part number	m (kg)
R037540013	0.71

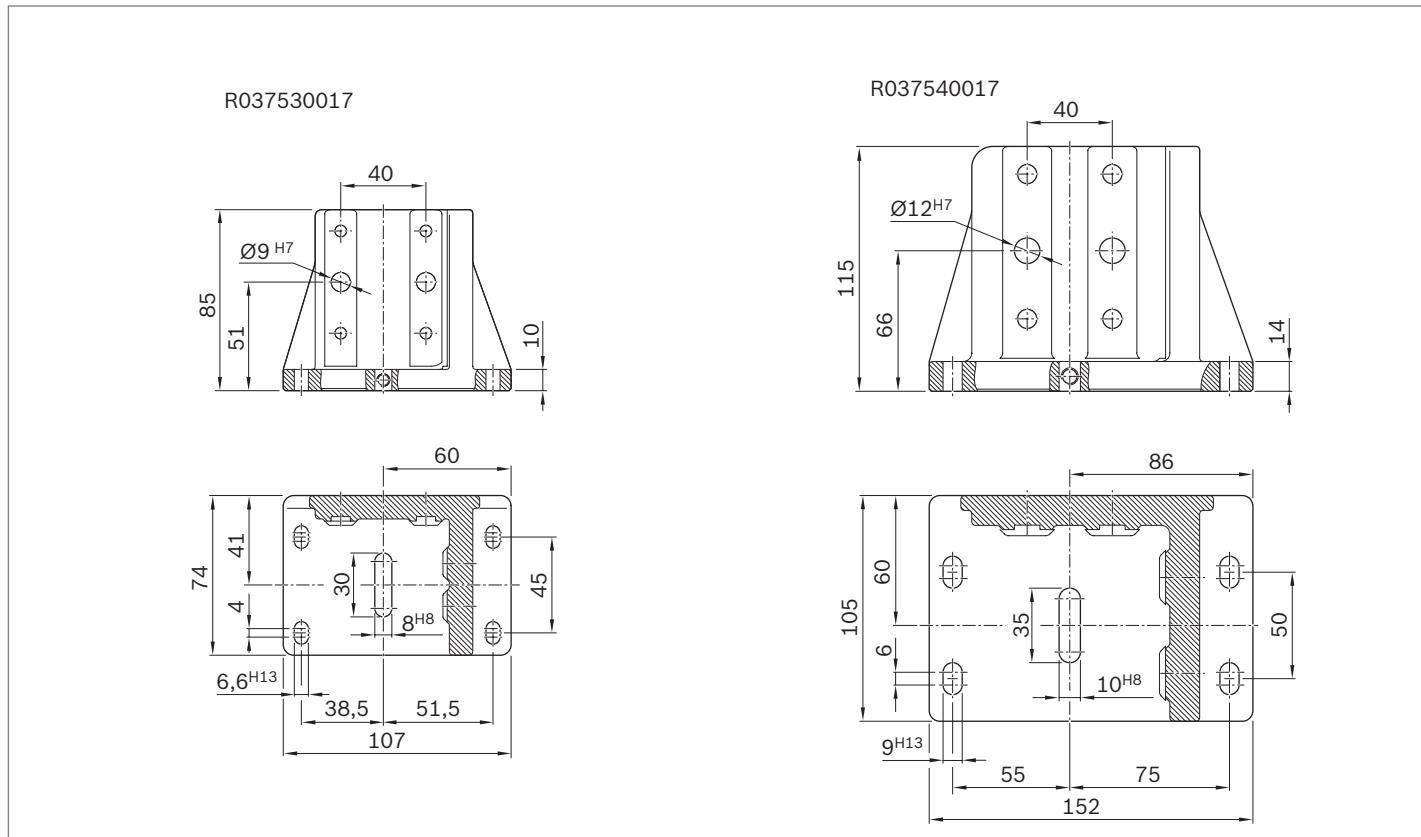

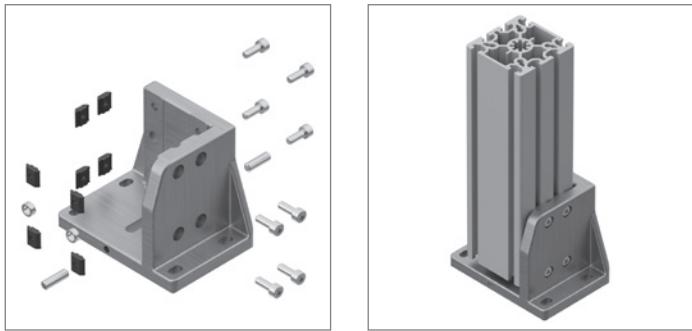

Foot (with webs), adjustable version

Simple connection of strut profile to base frame.
Adjustable in one axial direction.
The base of the adjustable foot can be aligned in one axial direction. The foot has a groove milled along the centerline of its base ($8^{\text{H}8}$ for profile 60×60 and $10^{\text{H}8}$ for profile 90×90). The groove has been widened at each end and provided with threads. Using the pins provided, the foot can be aligned to any required elements at the installation location, such as a key or locating pin.

Scope of supply

Foot (material: Al), sliding blocks, screws, centering rings

Foot	Part number	m (kg)
For profile 60×60	R037530017	0.6
For profile 90×90	R037540017	1.6

Cable drag chains

Rexroth offers a complete system solution to cover many applications areas: Cable drag chains, guide channels, and clamping profiles that can be combined at will to produce the desired configuration.

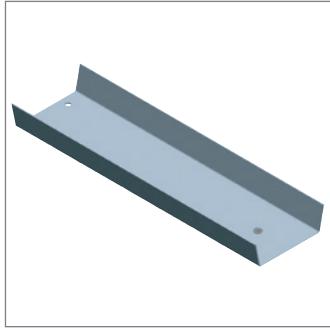

Cable drag chains, System MP in ESD design

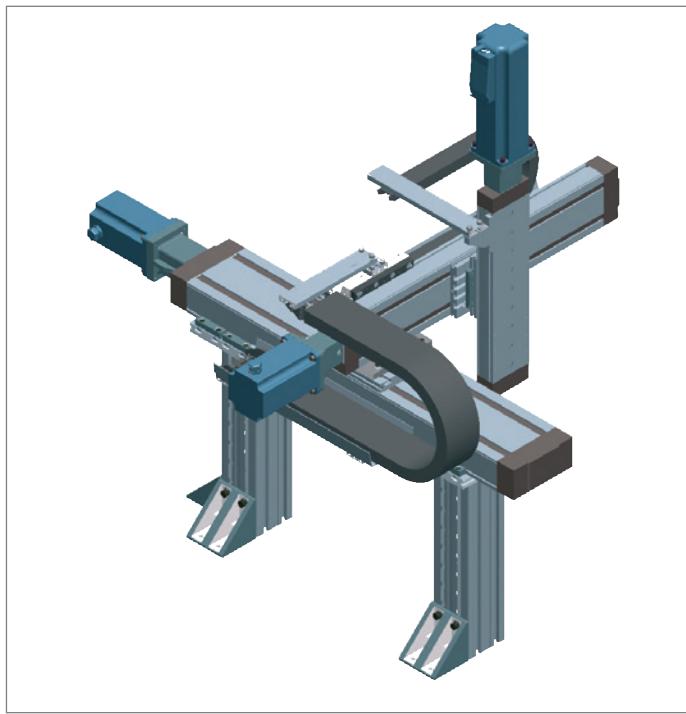

- ▶ Cable drag chains in 2 types with 3 sizes each
- ▶ Pre-tensioned
- ▶ Suitable for self-supporting installation
- ▶ Generally ESD-compatible
- ▶ Different number of separators, depending on the size
- ▶ Chain brackets complete with screws and sliding blocks
- ▶ Guide channels in corrosion-resistant steel sheet

▲ Clamping profiles

▲ Guide channels for cable drag chains

▲ Cable drag chains

Cable drag chain

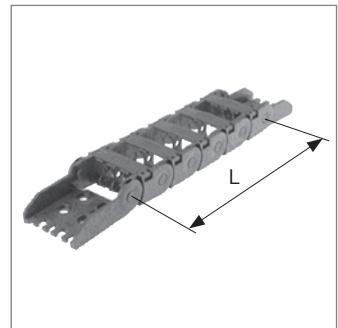

System MP18.2

Radius 78 mm

Pitch 33 mm

Separators are installed at every 2nd chain link

Ordering data: R039170001, 825 mm (25 chain links of 33 mm each)

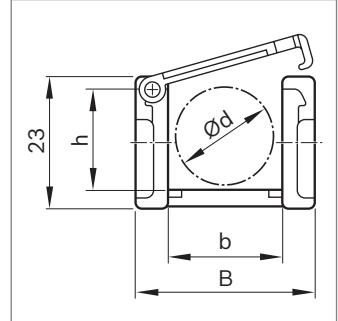

L = multiple of 33 mm pitch

Cable drag chain	Type	B (mm)	b x h (mm)	Ød (mm)	Part number	No. of separators Every 2nd chain link
ESD-MP18025		38	25 x 18	max. 15	R039170000	1

Chain bracket

(included with the cable drag chain)

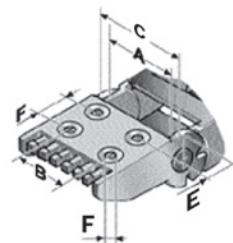

Scope of supply1 piece with bore, 1 piece with pivot pin screws
and sliding blocks

The chain brackets must be fastened using the included screws. The cables or hoses must be fixed to the chain bracket's integrated strain relief using cable binders.

Technical data

Unsupported length

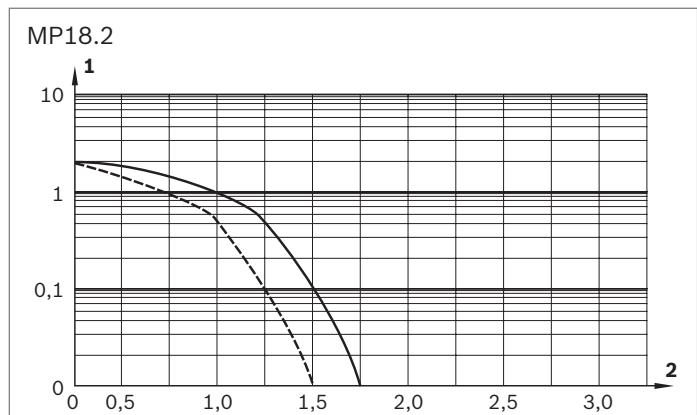

F_{Lg} :

Ideal installation situation for high loads at the limit of the max. travel parameters. In this range the chain upper run is still biased, straight or has a max. sag of 10 – 50 mm depending on the type of chain.

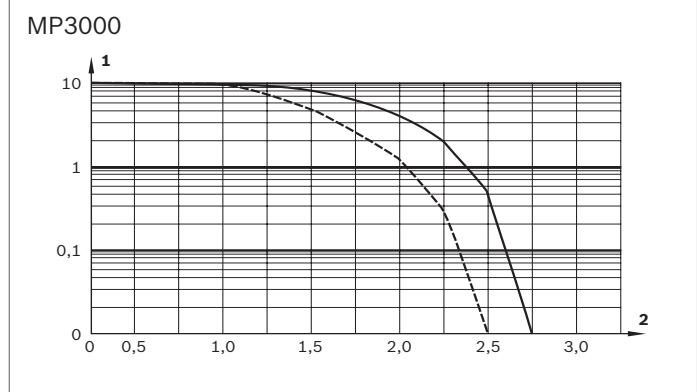

F_{Lb} :

Satisfactory installation position for many applications working in the lower to middle range of the max. travel parameters. Depending on the chain type, the sag of the chain upper run is > 10 – 50 mm but less than the max. sag. If the sag is greater than F_{Lb} , the arrangement is unsuitable and should be avoided. Please choose a more stable cable drag chain.

1 Load (kg/m) — F_{Lg}
2 Self-supporting length (m) - - - F_{Lb}

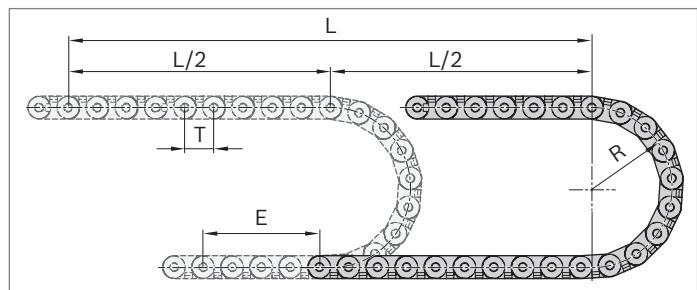

Determining the chain length

The fixed point of the cable drag chain should be connected in the middle of the travel distance. This arrangement gives the shortest connection between the fixed point and the moving consumer and thus the most efficient chain length.

$$L_K = \frac{L}{2} + \pi \cdot R + 2 \cdot T + E$$

MP18.2: ~ 1 m chain: 30 x 33 mm links

MP3000: ~ 1 m chain: 22 x 45 mm links

L_K = Chain length (mm)

L = Travel distance (mm)

R = Radius (mm)

T = Pitch (mm)

E = Distance between entry point and middle of travel distance (mm)

Guide channels

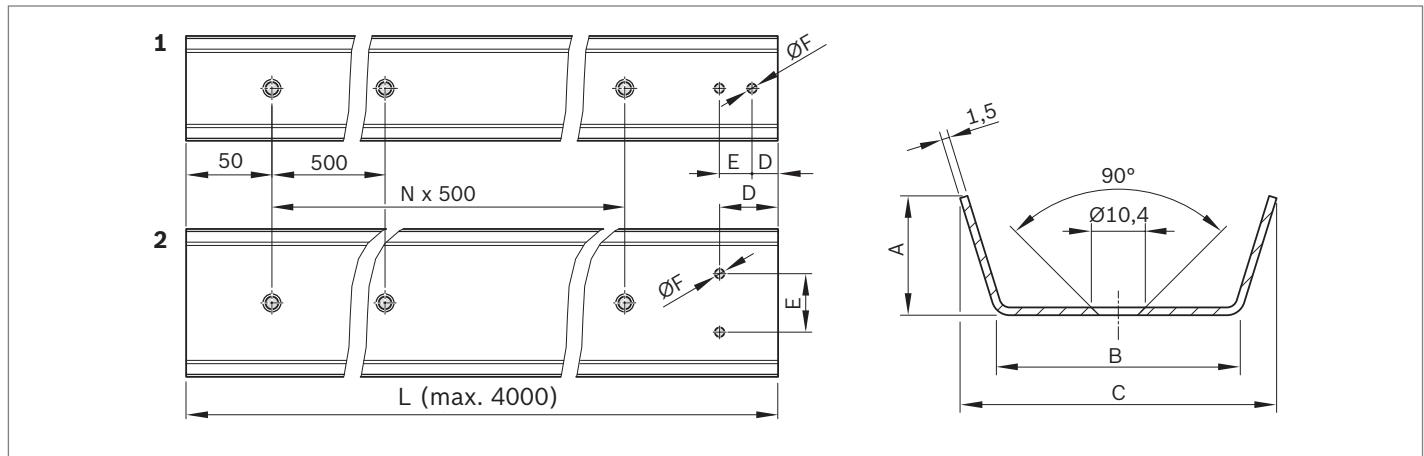

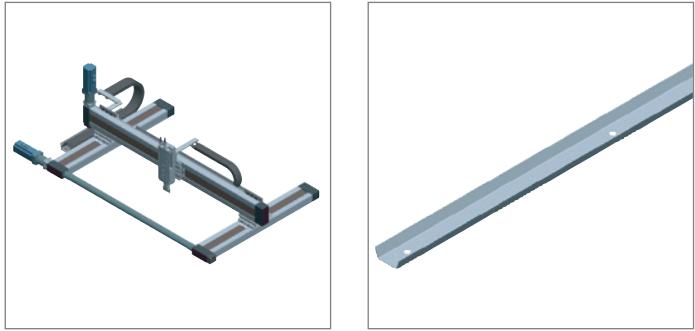

For cable drag chains

The guide channels are matched to the cable drag chains. For short travel distances they serve as a support for stacking the links and for long travel distances they also serve as guides. To minimize chain wear, stainless steel sheet was chosen as the material for the guide channels.

The mounting holes for the chain bracket are already integrated in the guide channel.

The guide channel has holes drilled at 500 mm intervals along the centerline for M5 countersunk screws.

It comes complete with the necessary countersunk screws and sliding blocks.

Attachment of cable drag chains

The following standardized interfaces were designed to facilitate connection of the cable drag chain or guide channel in a variety of ways. By combining these standard elements, it is possible to accommodate almost any desired connection configuration.

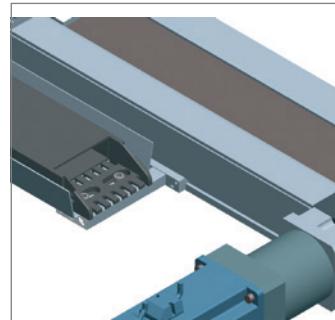

Cable drag chain node point

Scope of supply

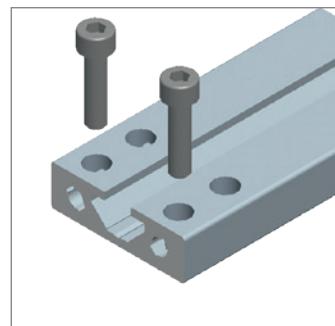

Profile (1x), socket head cap screws M6 (2x), sliding block M6 (2x), Screw DIN 7500 M5x25 (2x)

▲ Attachment of cable drag chains

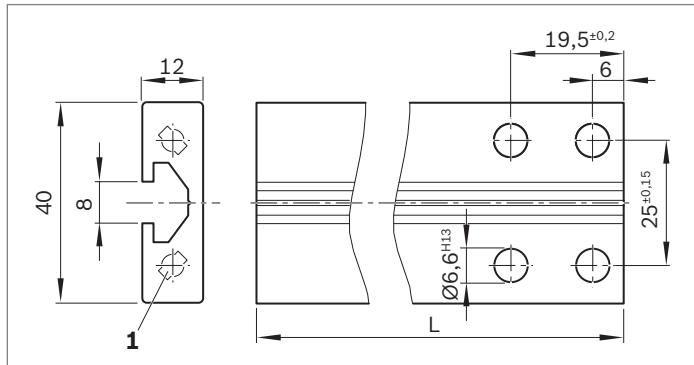

▲ Attachment of cable drag chain with guide channel

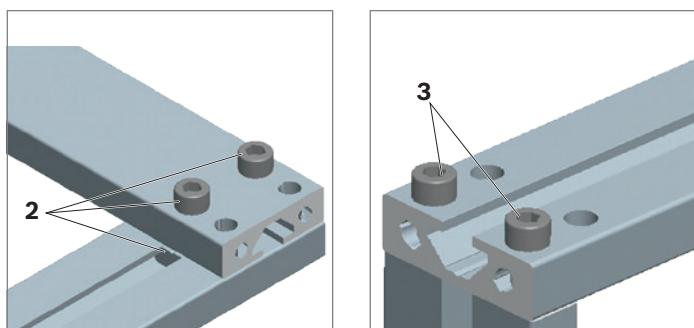

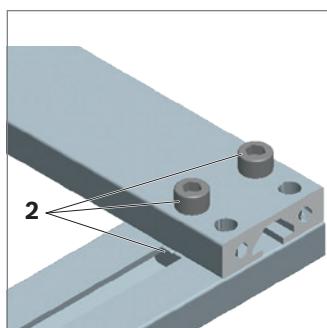

Profile	Length	Part number	m
(mm)	(mm)	Variable	(kg) (kg/m)
12x40	200	R039170012	0.18
	○	R039170013	0.90

1 For self-tapping screws M5

Examples

Any standard small parts not used must be disposed of appropriately!

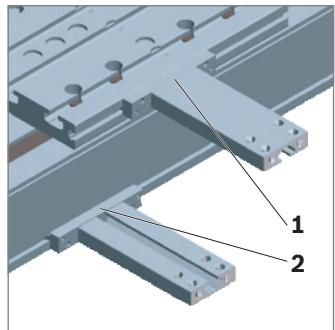

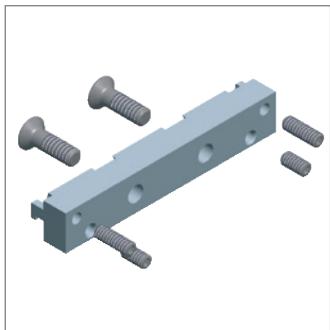

2 Screws M6x20,
sliding blocks N8M6

3 Screws DIN7500 M5x25

Linear motion system node point

Scope of supply

Clamping profile (1x), countersunk screws per DIN 7500 M5 (2x), set screws (4x)

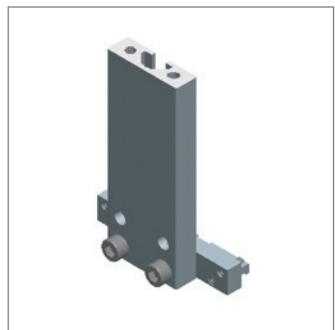

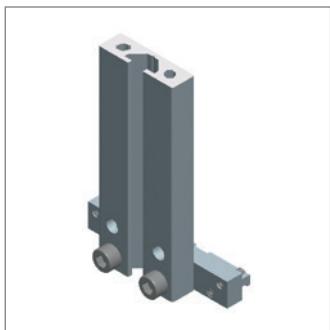

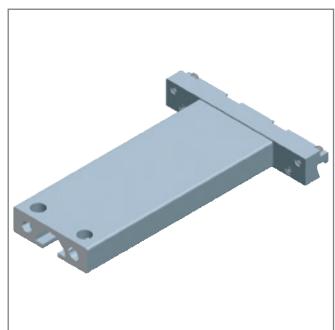

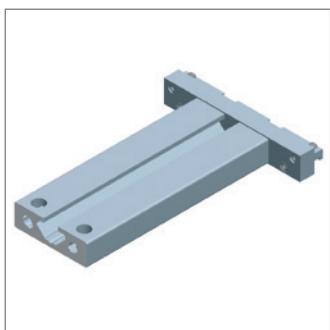

1 Attachment to the connection plate

Linear motion system	Profile nominal dimension	Part number
CKK/CKR	70	R039170014
	90	R039170014

EasyHandling – Easier. Faster. More Economical.

Planning – up to 70% faster

EasyHandling tools help users right from the component selection stage – by proposing solutions with all the necessary information on parts lists, technical data and CAD drawings.

Installation – saves up to 60% on time

Thanks to positive-locking interfaces, the mechanical components are perfectly aligned and accurately connected right away.

Start-up – reduces your effort by up to 90%

With the smart start-up assistant EasyWizard, parameterization and configuration take no time at all. Your handling system will be ready to go in just a few clicks.

Production – more economical and more efficient

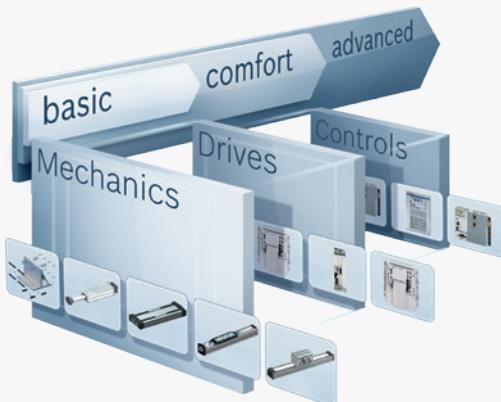

Rexroth enhances the system effectiveness still further with smart application tools: The drive controller software sends maintenance-related messages to the user based on operating hours and travel to help schedule servicing at the right intervals. The result: longer life and reduced risk of failure.

Future developments – continuous improvement

Prepare now for future market developments: One of the great features of EasyHandling systems is their openness. The flexibility of the mechanical and electrical components allows you to adapt quickly and efficiently to new production requirements.

EasyHandling – more than just a building system

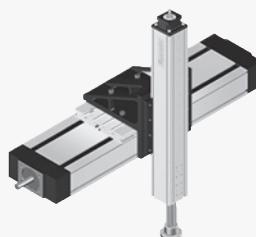

The modular system concept for perfect scalability

basic – made-to-measure mechanics

EasyHandling basic includes all mechatronic components for complete, custom **single and multiaxis linear motion systems**.

All of the component interfaces are systematically standardized, making it possible to combine them with ease. Practical tools and aids make selection and configuration even easier.

EasyHandling

comfort – get off to a faster start

EasyHandling comfort expands the basic component range by adding **powerful servo drives with multiple protocol capability**. The universal, smart control units are ideally suited for a variety of handling tasks.

Unique: with the **EasyWizard start-up assistant**, linear motion systems are ready to use after entering just a few product-specific parameters.

EasyHandling

advanced – controls for demanding requirements

With its **individually scalable, high-performance Motion Logic solution**, EasyHandling advanced makes configuration and handling even easier. Predefined functions covering more than 90 percent of all handling applications eliminate the need for lengthy programming.
